brain-tumor

March 8, 2024

```
[1]:  # This Python 3 environment comes with many helpful analytics libraries
      ↪installed
      # It is defined by the kaggle/python Docker image: https://github.com/kaggle/
      ↪docker-python
      # For example, here's several helpful packages to load

      import numpy as np # linear algebra
      import pandas as pd # data processing, CSV file I/O (e.g. pd.read_csv)

      # Input data files are available in the read-only "../input/" directory
      # For example, running this (by clicking run or pressing Shift+Enter) will list
      ↪all files under the input directory

      import os
      for dirname, _, filenames in os.walk('/kaggle/input'):
          for filename in filenames:
              print(os.path.join(dirname, filename))

      # You can write up to 20GB to the current directory (/kaggle/working/) that
      ↪gets preserved as output when you create a version using "Save & Run All"
      # You can also write temporary files to /kaggle/temp/, but they won't be saved
      ↪outside of the current session
```
